

FLEX RAIL

Inovative rail for solar panels, designed to work with all roof mounting systems for flexible and reliable installation.

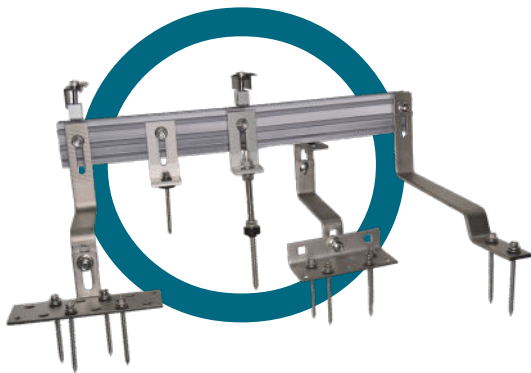

One rail, every roof: the flexible and durable solution for your solar installations.

This aluminum solar rail is designed for maximum adaptability across all roof types. Combining lightweight construction with strength and flexibility, it works seamlessly with all common mounting systems, including tiles and slates.

Its universal design allows installers to work efficiently without the need for specialized rails for each roof type, reducing complexity and installation time.

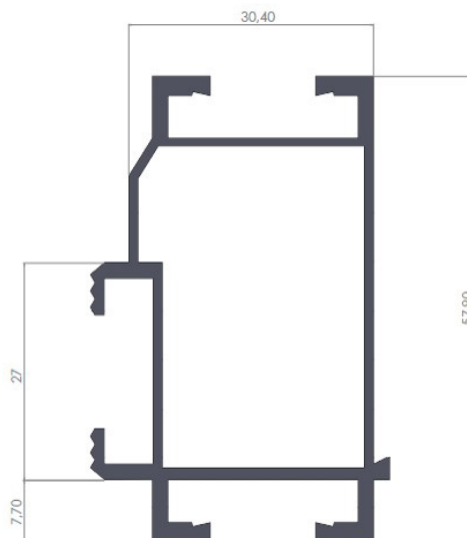

The optimized profile ensures stability and ease of handling during installation. This rail provides a reliable, safe, and professional solution for solar projects of any size, whatever the roof coverage.
